

Start at the Source

A Design Guidance Manual for Stormwater Quality Protection

by the Bay Area Stormwater
Management Agencies Association

BASMAA's second edition of *Start at the Source* focuses on the importance of considering stormwater quality in the early stage of planning and designing land development and redevelopment projects.

This current edition has been updated and expanded to include commercial, industrial, and institutional development, as well as a technical section to provide more detailed information on the characteristics, applications, design criteria, maintenance, and economics of the details that are discussed in this document. Examples of case studies, frequently asked questions, and a complete glossary are also included.

This manual was developed under the guidance of a Review Committee comprised of representatives from the public and private sector. The principles and techniques described in this book are valuable and worthwhile to all regulatory agencies, planning and public works departments, developers, builders, engineers, landscape architects, EIR/EIS consultants, and members of the academic community.

Price: \$35.00 plus tax, shipping and handling.
